AMENDED ELECTRONIC CASE MANAGEMENT PROTOCOL ORDER

On July 10, 2012, representatives from each of the putative plaintiffs' classes and certain of the defendants met with the Court to discuss implementing procedures to clarify and simplify the electronic case filing ("ECF") system in Automotive Parts Antitrust Litigation. After careful consideration, the Court implements the following ECF procedures:

1. The "Master Case," 12-md-2311, includes all cases involving automotive parts antitrust actions that are transferred to the Court by the Judicial Panel on Multidistrict Litigation ("JPML") or otherwise consolidated or coordinated with other matters before the Court under the Master Case, 12-md-2311.

2. The Master Case includes "Lead Cases" relating to specific parts, including, but not limited to Wire Harness, Instrument Panel Clusters, Fuel Senders, Heater Control Panels, Bearings, and Occupant Safety Systems.

3. The Lead Cases include "Class Cases" for each particular putative class of plaintiffs (Direct Purchaser, Automobile Dealer, and End-Payor) to the extent such putative plaintiff class has brought an action related to the specific part.

4. Within each Class Case, there will be individual member cases referred to as "Individual Cases". These are the originally filed individual complaints that will retain the originally assigned case numbers. Accordingly, the cases will be organized as follows:
